GameChange Receives 18 MW Order For Max-Span Pile System In N.J.

in News Departments > Projects & Contracts

by **SI Staff** on Thursday 08 January 2015  

 Tweet    8+1   0

GameChange Racking has **received** an order for its Max-Span post system with driven piles for four projects in New Jersey totaling 18 MW.

The customer is a large private equity firm that develops solar projects in the Northeast. Panels for the projects are primarily Sunprime 350 W bifacial double-sided glass panels. Inverters are being provided by Solectria Renewables.

Andrew Worden, CEO of GameChange Racking, says the ability of the Max-Span post system to support double-sided glass modules under heavy wind and snow loads was a "critical factor" in its selection.
